

2019 CORMIER ROAD RECONSTRUCTION (ASHLAND AVENUE TO ONEIDA STREET)

To the Cormier Road Businesses, Stakeholders, and Traveling Public,

This is the initial project update for the Cormier Road Reconstruction Project from Ashland Avenue to Oneida Street. As you may remember, in 2018, the utilities along this stretch of roadway were reconstructed and relocated in preparation for the 2019 roadway reconstruction. Starting April 22nd, roadway reconstruction of Cormier Road will begin.

As part of this initial update, we want to provide you with two main elements: 1) the tentative schedule of the project including construction zone traffic control and 2) the project contacts.

SCHEDULE – CONSTRUCTION ZONE TRAFFIC CONTROL

The project is split into four phases (schedule is attached). Phase I will start April 22nd and last approximately 2-3 weeks. This phase includes the reconstruction of Cormier Road intersection west of Ashland Avenue approximately 200 feet. Phase I will include the only full roadway closure as this section of roadway will be closed for 2-3 weeks to complete the work. Phase II and Phase III will start approximately in mid-May and will involve the reconstruction of the southern half of the roadway. This work will involve the closure of the south side of Cormier Road from Ashland Avenue to Oneida Street. During these phases, a lane of westbound travel will be allowed through the construction zone to all properties. Phase IV of the project will start approximately in late July and will involve the reconstruction of the northern half of the roadway. This work will involve the closure of the north side of Cormier Road from Ashland Avenue to Oneida Street. During this phase, two-way traffic will be allowed on the new south side pavement to all businesses. Project completion is scheduled for the week of September 9th.

PROJECT CONTACTS

The Cormier Road Reconstruction Project is a WDOT administered project with a project engineering consultant overseeing all construction activities along with the general construction contractor. Should you have any project related questions or concerns, feel free to contact:

Brett Vissers (KL Engineering 920-366-4393)

or

Travis Brush (KL Engineering 920-366-3319)

Project updates will be coming forth on a regular basis throughout the project so please feel free to check-in throughout the construction season!
